## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under U.S.C. 121:
  - I. Claims 1-11 are drawn to a sorption module generator classified in class 62 subclass 480.
  - II. Claims 12-32 are drawn to a thermal compressor device with heat fins classified in class 62 subclass 467.
2. The inventions are distinct from each other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05 (c)). In the instant case, invention I related to a sorbtion generator module used as a receiver, condenser and evaporator to enhance the absorbing or adsorbing of a sorbate within a generator apparatus. Invention II related to a heat exchanger system using generators and heat exchangers to enhance heat exchange across a large area, but does not necessitate that the structure of the generators in invention II be the same as those claimed in invention I.
3. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
